Dodballapura Water Supply.

1. Under orders of Sir K Seshadri Iyer issued in August 1895 a Scheme for supplying drinking water to the Dodballapura Town was prepared by Mr R. V Sundaram Iyer in June 1902. The Scheme was abandoned.

13 The Subject was discussed at the Representative Assembly of 1906. Thereupon the Chief Engineer was requested to expedite the Settlement of the question. In June 1910 the Executive Engineer of the Water Supply and Storm Division Submitted a memo stating that water may be supplied to Dodballapura by pumping at Yerra Nagenhalli Tank the estimated cost of the project and its annual Working Charges being Rs 46,453 and Rs 3,500 respectively. As the

the Municipal Council were unable to finance the Scheme and meet the working charges it was ordered that the Scheme should have to wait till the resources of the Municipality are improved. Besides, the towns people are not in favour of this project chiefly for the reason that the sewage of the town is drained into it and that the Catchment area is surrounded by manured lands. They are for drawing their water supply from the Hemavathi Reservoir costing about Rs. 2100, of the working charges amounting to Rs. 1000 a year. It is said that, if this project is taken up, the town people would contribute Rs. 1500 and over for this project. The Chief Engineer has sent the papers relating to this project to the Dy Comr

Water supply to Dodballapur town.

27 The people of Dodballapur met me on my way from Goribidnur & Bangalore on the 12th instant and represented that orders had not as yet issued on the proposals relating to the water supply of their town.

It is understood that the townspeople have subscribed Rs 18,000 towards the proposed work and that the question is under consideration.

The Superintending Engineer should be requested to submit the outlines of a scheme (with a plan) explaining:-

1) the source of supply,
2) the description of the conduit proposed to be used,
3) the nature of the distribution service,
4) the probable cost of maintenance, &
5) the proposals for meeting the maintenance charges.

The Superintending Engineer may also be requested to submit rules for working the system. No undue advantage should be shown in favour of officials or individuals until the scheme is finally settled and brought into working order.

Detailed estimates are not required at this stage. It would be

be enough if a rough scheme embodying the above information is sent up. All necessary information should be obtained from the Municipality and the Deputy Commissioner and the proposals should be submitted in a form which would enable Government to pass final orders without delay.

The source from which any excess over estimate might be met may also be indicated after consulting ~~with~~ the Municipality.

Serial No.

1371

Reg 96

reduced still further to Rs 926. In view of the state of things Govt have observed in para 5 of the current year's budget that the financial condition of the Dodballapur Municipality is not satisfactory

62. As the municipal finances are bad and show signs of growing to worse it is impossible for the Municipality either to contribute anything towards the capital cost of the water supply project (Rs 70,000) or to bear the cost of the annual maintenance of Rs 1000. Even if the people of Dodballapur subscribe a portion of the capital cost, Govt can only think of helping the Municipality with a grant of 50% of the initial capital charges (in accordance with the usual policy) when the Municipality is able to bear the other 50% and the annual maintenance charges.

63 Under these circumstances the Municipality will have to be advised to defer the water supply project till it is able to spare 35,000 towards the capital cost and Rs 1000 for annual maintenance charges.

13/5/14

General and Revenue Secretariat | Jul File No. 275 of 1912.

Serial No

15 It is not understood how in the face of the foregoing opinion that filtration is not feasible for want of sufficient head the Dy Comm= can say that filtration is absolutely necessary

I do not see where it is said that the scheme can be carried out at an unfiltered water supply for an outlay of Rs 50000, as stated in the Dy Comm= letter

Schemes of water supply deserve every encouragement but it is a matter for consideration whether an unfiltered water supply is worth having at such enormous expense. The loss of land revenue to the extent of Rs 1300 is daily accruing, the capitalized value of being about Rs 37000. The initial cost is being about Rs 85,000. To expect Govt to grant Rs 50,000/- out of this ~~would be~~ is to expect Govt to make a sanction of Rs 87000/- for the purpose

The Municipal revenue seems susceptible of much improvement and if the Municipality can undertake to double then means a scheme may be devised for a loan which together with Rs 20,000 contribution will suffice for the capital outlay Nothing short of doubling the

This question may be discussed at a meeting of Council at which the Chief Engineer may be requested to be present.

The questions for consideration are :-

(1) Whether the scheme is sound.

(2) Whether, if the population of the town increased, the water supply could also be correspondingly increased.

(3) Why one half of the cost should not be paid by Government if solid guarantees are given for the contribution of the other half by the townspeople and for finding all the money required for maintenance.

DODBALLAPUR WATER SUPPLY.

Several sources for a gravitation supply were investigated such as Sivapur, Ranyaghatta, [illegible] tanks but none of them proved satisfactory.

2. The Superintending Engineer now submits an estimate amounting to Rs 65,000 for gravitation supply from Konaghatta tank, 4½ miles from Dodballapur.

3. The estimate is made up as under:-

	Rs
(1) Improvements to the tank.....	5,000
(2) Masonry duct for 30,000 feet	35,000
(3) Pure water tank	6,000
(4) Distribution	8,000
(5) Compensation	8,000
(6) Unforeseen charges	3,000
Total	65,000

4. The scheme is unsatisfactory for the following reasons.-

(1) Masonry duct will give future trouble If 6 inches pipes are to be used, cost will double itself.

(2) Compensation Rs 8,000 is too low. For a loss of revenue of Rs 1,000, at least Rs 20,000 will have to be paid.

The total cost is likely to exceed one lakh of rupees utterly beyond the resources of the Municipality.

(3) Lastly the head available will be very little and if 6 feet or 8 feet of it is to be used up for filtering the higher portions of the town cannot be commanded.

For these reasons, this must be abandoned.

Alternative suggested.

(1) Nagarkere tank close to the town with a capacity of 100 units may be improved by raising the weir a foot or two so as to have a two years' supply and all cultivation below prohibited.

(2) A small pumping installation may be adopted and water pumped from one or two wells into four or five cisterns or balancing tanks in different parts of the town as at Shimoga and Harihar. Money to be spent for long pipe lines, &c., may be laid out for the pumps.

(3) A revised scheme on these lines has now to be prepared and submitted. The Superintending Engineer Mr. Ranga swami Iyengar will be asked to investigate the question.

Schemes amounting to Rs 46,458 to make supply from Nagarakere had been worked out but it was ordered in G O no 625-9/ml330-06-12 dated 19th July 1912, that it might be put till the resources of the Municipality improved

(24) Letter no. S 82 dated the 7th August 1912 from the Dy. Comr., Bangalore West submitting detailed proposals for financing the water supply project of the Doddaballapur town.

Submitted. The previous papers on the subject are attached to facilitate reference to the Chief Engineer by whom it is proposed for needful action.

2 According to the present proposals, Govt. is expected to contribute a majority of the cost and to advance a loan of Rs 15,000 as a loan to the Municipality repayable in 30 years, a sum of Rs 2000 being raised locally by subscription and the balance of Rs 2000/- as also the annual maintenance charges being found by the Municipality.

3 The Municipality proposes to find the necessary funds for the annual maintenance charges in the following manner.

(a) By keeping a balance of 75% of the income duty Rs 1000

(b) By introduction of tolls . . . 600

(c) Market fees 300

(d) Revision of taxes 300

Total Rs 2200

the Maharaja of Mysore, Genl. and Rev.Deptts.
(Camp)Mysore.

Sir,

I have the honor to state that the subject of improving the water-supply of Dodballapur town was raised so far back as 1906(Vide subject No.522of the Dasara Representative --- Assembly of 1906)and the Government in their order No.628-9 -Mmnl.326-06-12 dated 7th July 1912 stated that the scheme that was then under consideration viz.the supply of water from the Nagarakere tank could not be taken up as it involved heavy initial outlay(Rs.46,456/-) and annual maintenance charge(Rs.3,511/-),which the Municipality was not able to find. It may be mentioned in this connection that the --- Chief Engineer suggested that if at least half of this amount could be financed by the Municipality and the residents,the Government might then be approached to give a grant-in-aid for the other half, the maintenance charges being always borne by the Municipality.

2. The residents of the town also petitioned the Government that the alternative project of supplying water from the Konagattadakere which was also investigated might be considered, as it was less costly, both in the capital cost and the annual charge required. Accordingly the Public -- Works Department was written to and the file of papers con-

9

connected with the latter project has been obtained and herein enclosed for perusal. This scheme is estimated to cost Rs.34,000/- with an annual maintenance charge of Rs.1,000/-. As this sum too was beyond the means of the Municipality to pay, it was pointed out to the Municipal Council that there was no chance of success of this scheme also, unless the citizens came forward to meet a moiety of the cost.

3. The Municipal Council put the question before the towns-people at meetings held on the 1st and 5th instant,

1.	Mr. Venkatenarayana Chetty	Rs.5,000	as a result of which the
2.	" Chandrasekhariah	5,000	
3.	" Adinarayana Chetty	1,000	marginally noted liberal
4.	" Shroff Puttanna	1,000	
5.	" Chikka Hamurthiah	1,000	subscriptions were pro-
6.	" Gurusinga Lingappa	1,000	
7.	" Lakshmaiyya	1,000	mised and announced.
8.	" Sreekantiah	1,000	
9.	" Narasimhaiya	1,000	(Vide copies of the re-
10.	" Aasse Manjundappa	1,000	solutions enclosed.
		Rs.18,000/-	

4. As the offer of the towns-people come up to a handsome sum of Rs.18,000/-, I submit that their prayer for a grant-in-aid from Government of Rs.17,000/- for putting the scheme on hand may be sanctioned and in view of this exhibition of combined public spirit which is probably the first of its kind, it is requested that sanction of the scheme may kindly be announced before the close of the present session of the Representative Assembly.

5. As regards the annual maintenance charges which are estimated at Rs.1,000/-, it is suggested that the same be met from the levy of toll-gate tax and the increased mohatarfa expected from the revision of the tax, and also if necessary from the levy of water cess. I am of opinion that it is possible to improve the receipts of the Municipality by revising the mohatarfa tax on houses and shops or by levying a water cess, so as to yield an annual increase of Rs.1,000/-, wherewith the recurring charges of maintenance of the water supply scheme may be met. The actual receipts from the tax on buildings and shops for the year 1913-13 was Rs.1535 and 864/- respectively. If the rate be increased by

by 50 per cent in those cases the annual revenue will be enhanced by about Rs.1,000/-. The Council desire that out of the sum of Rs.18,000/- subscribed by the citizens a sum of Rs.1,000/-(after defraying half of the cost) may be set apart for giving free house-connections to those who have so generously subscribed to the works. They will of course pay the water cess or enhanced mohatarfa.

6. I therefore commend the above proposals for the sanction of Government.

7. Further, I beg to submit that the names of the gentlemen and the amounts paid by them towards this scheme may be inscribed on a stone tablet and installed at a prominent place in the town, as this will be a suitable recognition of the public good done by them and would serve as an incentive for others.

8. As it is the desire of the donors, * that the water-works should be called after the late Mr.Delvoy Devaraj Urs, I request that Government may be pleased to grant this their prayer also.

I have the honor to be

Sir,

Your most obedient servant.

Deputy Commissioner,
Bangalore District.

* Vide proposal made in a public meeting held on 1st January 1913

Proceedings of municipal special meeting held in continuation of the meeting held on the 2bi instant.

PRESENT.

Mr. P.Mahadeva Iyn,B.A.,B.L.,Munsiff
" Lakshmikantha Iyengar,Sub-Registrar & Municipal member.
" P.Chaluviah, Pleader.
" M.A.Tirumalachar,Sheristadar.
" V.Rangaswalu Mudaliar,S.P.W.officer and Municipal member.
" A.Venkatanarayana Setti, Municipal member.
" S. Puttanna Municipal Member.

" D.Kempadiappa,Municipal Member.
" Hejaji Srikantiah
" Siddappa
" Audinarayniah Setti, Municipal member.
" A.Srikantial son of Amase Manjundappa
" Mr.Chika Hanumanthiah, Contractor and Municipal member
" K. Rudrappa

2. The following gentlemen announced the sum noted against their names in addition to those whose names have been recorded on the previous meeting day:-

1.Mr.Hejaji Srikantappa	Rs.2,000
2." Alampalli Lakshmayya	" 1,000
3." Amase Manjundappa	" 1,000

Recorded with thanks.

3. It was proposed by Mr.Venkatanarayana Setti and seconded by Mr.Srikantiah son of Mr.Amase Manjundappa that all the members that have now contributed to the water-supply scheme should have a tap in their houses and that as the amount now subscribed in all is -- Rs.18,000/- being Rs.1,000/- over and above the sum required for the half the cost of water-supply, it was resolved that this excess of Rs.1,000 be utilized for the giving of a tap for the houses of the gentlemen mentioned above without any charge.

4. It was resolved that the Deputy Commissioner may be moved to have an inscription at the main cistern of the water-supply with the names of the gentlemen who have generously come forward to contribute towards this important water-supply matter, with the amount subscribed against the name.

5. For the annual maintenance charges of the water-supply of Rs.1,000/- Mr.Venkatanarayana Setti, Municipal member, proposed peopesed and Mr.Chik Hanumanthappa Municipal Member seconded that the annual maintenance charges be met from the levy of toll-gate tax and the increased mohatarfa expected from the revision of this tax and also if necessary from the levy of water cess.

All the Municipal members present approved.

6. It was resolved by all gentlemen present that the Deputy Commissioner may be requested for the favour of getting the sanction of the Government, to start the water-supply works as early as practicable.

9/10/1913. Sd/-Mahammad Syed Sheriff,
Vice President.

Sir,

Adverting to your ~~letter~~ No.7311 dated 27th January 1914, forwarding copy of your letter No.7310/M L 275-12-9 dated 27th January 1914 to the Chief Engineer in Mysore re- th water sup--ly of Dodballapur Town, I have the honour to submit herewith in original, the report on the scheme received from the Executive Engineer, Water Supply and Stores Division and to state as follows -

The scheme is estimated to cost about Rs65,000/- excluding the cost of filter, which is estimated at Rs5,000/- A filter, I think, is absolutely necessary as even with the best pre--cautions, Tank water is liable to contimination. Thus the total cost comes to about Rs70,000/-, excluding the annual maintenance charge, estimated at ~~about~~ Rs1,000/- The need for water supply to the town is real and urgent. The towns en have exhibited a deal of genuine public spirit and liberally subscribed Rs18,000/- towards the scheme, without entertaining the least doubt in its success, and thus showed real earnestness in the matter A sum of Rs3,000/- more can be expected, if subscription of Rs100/- and above are asked for

The Dodballapur Municiplity is financially very poor and as such it is not in a position to contribute anything towards the scheme, but the Municipal Council are of opinion that about Rs 2,000/- may be paid out of the closing balance of Rs2,316-7--2 at the ~~at the~~ credit of the Municipality at the end of 1912-

of 1912-13. This step is opposed to standing orders as the Municipality will be deprived of minimum working balance.

The roads and drains within the Municipal limits are not in good condition. They require more attention to be paid when the scheme for water supply is put on hand All these improvements mean additional expenditure to the Municipality, which it can ill-afford to defray unless the resources are properly husbanded. With a view to augment the annual income of the Municipality to meet the sanitary and other improvements it is proposed to introduce Toll-gate Tax and to raise the House & Chatarfa Taxes of the town

The matter was placed before the Municipal Board at its meeting held on 2nd April 1914 and it was resolved that a sum of Rs2,000/- out of the closing balance be contributed for the scheme, that Government be approached to contribute a sum of Rs50,000/- towards the scheme and that the maintenance charges be met by levying water cess on the house tax at 75% or more, if necessary Instead of depleting the Municipal balance, it will be possible to raise Rs2,000/- or Rs3,000/- more by subscriptions.

I may be allowed to state that the need for the supply of water to this growing town is real and urgent and will remove the longstanding want Their desire to approach Government in the matter is sincere and deserved special consideration at the hand of Government, and it will be very hard to disappoint them, who have shown such great public spirit

Under these circumstances, I recommend that Government may be pleased to sanction a free grant of Rs50,000/- as special case towards the scheme the Municipality providing their own funds to meet the annual maintenance charge of Rs1,000/-

I beg to enclose the Municipal Council's resolution and

and solicit early orders of Government in the matter

I have the honour to be,

Sir,

Your most obedient servant,

K. Chandy

Deputy Commissioner,

Bangalore District

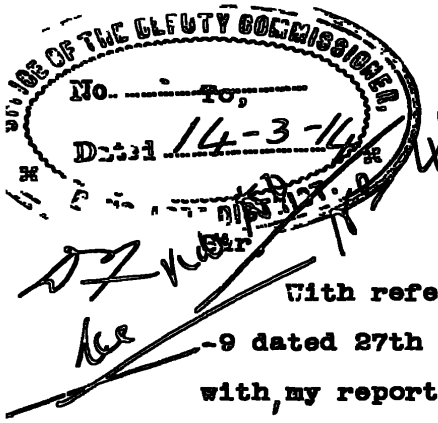
No. 334. Mysore Public Works Department,

Bangalore, Dated 10th March 1914.

From,

The Executive Engineer,
Water Supply & Stores Division,
Bangalore.



The Deputy Commissioner,
Bangalore District,
Bangalore.

With reference to General Secretary's No. 7310/W.I.275-12 -9 dated 27th January 1914, I have the honor to forward herewith, my report on the Water Supply of Dodballapur, for your opinion and favour of furnishing information regarding -

(1) The ways and means for meeting the maintenance charges and any excess over estimate.

(2) Formulation of a set of Rules for working the system without any undue advantage resulting either in favour of officials or private individuals.

As regards the latter, all that I can suggest is, to form a water committee among the members of the Dodballapur Municipality and entrust the management to them This committee may be represented by an enough number of official and non-official members. The Sketch will follow.

I have the honor to be
sir,
Your most obedient servant,

Executive Engineer,
Water Supply & Stores Division,
Bangalore.

Report on the preliminary estimate of probable cost of water supply to Dodballapur.

Preliminary.

Dodballapur is an important Taluk in Bangalore District situated 25 miles away from Bangalore on the Bangalore-Hindupur Railway Line. The population of the town as per Census of 1911 is 7,272 souls. It is a growing place, a good number of inhabitants are weavers, cloth making and gunny bag making are the chief industries of the place. The difficulty experienced by the towns' people for water supply is intense except during the rainy months. The present sources of supply are a number of wells scattered all round the town, most of the wells yielding brackish water not fit for potable purposes. Several tanks are sources of supply were thought of on several occasions but all of them have fallen through for one reason or the other.

I. Sources of supply.

The tanks which are worth considering as sources of supply are:-

		weir level.
(1) Nagarkere.	...	100.00
(2) Shivapur.	...	130.00
~~(3) Kannaghatta.~~	...	~~154.00~~
(3) Rajaghatta.	...	154.00
(4) Konneghatta.	...	162.00
(5) Highest point of the town.		147.6

15 ft

Of these, Nagarkere was once thought of as most suitable and as the tank is below town level, a pumping project to pump water from this tank to the town was prepared and submitted but it fell though as the Municipality could not find means of maintaining the system. Shivapur also is below town and hence the supply from that

must be by means of pumping and so, is not a desireable source.

Rajaghatta tank, no doubt is higher than the highest point of the town (147.60) but as it is 4 miles from town, it has not got sufficient head for a gravity system.

Lastly, Koneghatta tank, which is situated about 4½ miles from town commands the town very well. This tank is the 6th of a series of tanks of the Arkavati River, and is supposed to have a fairly good number of " Thalaburgies " in its catchment. The catchment area of the tank is 10 C4, its own independent being 4.5 sq. miles. It holds, at its present weir level, 196.36 units of water and irrigates about 211 acres of land. The revenue to the Government from this tank is about Rs. 1,300/-

The present capacity of the tank is not sufficient to ensure a permanent supply in years of bad rainfall and if this tank is selected as the source of supply, the weir may be raised to the required height to hold out for 2 years of minimum rainfall in the locality. The minimum rainfall in the locality is 16" and the run off in the catchment is assumedeaas 13 per cent of rainfall like that of Hesserghatta which is in the same series. These figures are based on the calculations made on the rainfall and run off of the esserghatta Tank, which is so close to the tank in question and which, moreover, is the last in the same series of the Arkavati River.

It will be seen from the calculating sheet

enclosed.

enclosed that the tank is raised by 3 feet, and can supply the town with the required supply for two years of minimum rainfall and last 4 months of the 3rd year, i.e., up to the mungaru rains. It is fair to assume that 2 years of bad rainfall is always followed by a year of early rains and hence the provision of the tank holding out to 4 months of the 3rd year, seems an ample provision.

Of course the above, is based on the assumption that all the lands below the tank is thrown out of cultivation and no water allowed for them.

Nature of Channel

After settling the source of supply, the next question that rises up is, the nature of channel in which the water should be led by gravity to town The idea of pipe laying should be considered as impossible as the head is very little and no reasonable size of pipe can be laid with head available to discharge the required quantity of water.

Thereare 3 other ways of leading water to the town -

(1) open earthern channel
(2) Open masonry duct,
(3) Covered Masonry duct.

of these, one was proposed to be adopted by the late Mr. Venkatachar in the year 1902, when he was Executive Engineer, Bangalore Division, at a cost of Rs. 6,000/-. Earthern channels for water supply is not satisfactory, as the water is likely to be contaminated on its way and much of it is generally lost by evaporation and percolation. Moreover it wants constant attendance.

Masonry ducts are better and consequently they

Care

can be recommended for the water supply. The duct for the present water supply is designed to discharge 100,000 gallons for 24 hours with a long slope of 1' in 1 mile. The bed of the duct at the tank begins at 8' below weir level and at the tail end is at the highest point of the town.

There are two sites proposed for the service reservoir, one near travellers' bungalow and the other on the ridge near Old Taluk Cutcherry in town. The site near Travellers' bungalow is recommended by town's people, but I see no advantage from it. On the other hand, bigger distribution pipes have to be laid from the reservoir to the town and consequently the the cost of the project will go high.

As it is, the site shown in the plan, is in a commanding part of the town and has the advantage of allowing distribution pipes being laid from this place to the rest of the town. As the total distance of such distribution is not much this site is recommended in preference to the one near the Travellers' bungalow. The length of the duct from the tank to the reservoir is estimated to be about 30,000 feet and cost Rs. 35,000 including cost of aqueduct on its way.

Nature of distribution service.

In the original proposal of water supply by Mr. Venkatachar, provision was made for construction of a number of Paranjys in town. But, distribution of water by public fountains located at convenient localities is preferable as they, the people have greater facilities in getting good water and so there is no chance of the water being

poluted by town's people as will be case when Farangys are introduced. The levels of the town admit of pipes being laid and the proposed cost of distribution is estimated to be Rs. 8,000 which, cannot be considered as excessive for a place like Dodballapur.

Initial cost.

From the abstract of estimate enclosed herein, it will be seen that the whole cost of the water supply without a filteration syster, which is not feasible in this place for want of sufficient head amounts to Rs. 66,000 This works out to Rs. 65 per head of population and is fairly reasonable considering other water supply like Shimoga and Harihar, the cost comes to Rs. 53 and Rs. 30 respectively, Even though the source of supply is quite near

Maintenance.

The cost of maintaining this water supply is not much as can be seen from the estimate enclosed which, amounts to Rs. 1000 per annum. The provisions made therein are necessary items and no special remarks are necessary I am given to under-stand that the unicipality can easily meet this recurring charges without difficulty.

Executive Engineer,
Water Supply & Stores Division,
Bangalore.

Doddaballapur Water Supply.

Details of scheme.

1. Source of supply.	Konaghatta tank.
2. Present capacity of tank.	126 units. Weir level 162.00
3. Proposed capacity.	220 units. Proposed weir 160.00
4. Present population.	
5. Prospective population allowed for	1,0000
6. Quantity of water allowed.	10 gallons per diem per head.
7. Quantity of water required per year for water supply.	33 units.
8. With increased capacity the tank holds out for 2 years of minimum rainfall and first 3 months of the year	
9. Proposed nature of channel.	Masonry closed dust for a length of 30,000 feet with a fall 1' in 3280 feet.
10. Level of bed of dust at tank.	157.00
11. --do-- town (tail end)	151.00
12. High at point of town.	147.60
13. Proposed site of reservoir.	146.00
14. Capacity of service reservoir.	100,000 gallons or a day's supply.
15. F.T.W.L. in reservoir.	150.00
16. Distribution.	2 independent systems (1) for Southern parts, (2) for Northern parts. by means of well situated fountains
17. Cost of Project.	Rs. 85,000/-
18. Cost per head of population.	Rs. 6.5

Proceedings of the Special Meeting of the

Municipal Council Doddaballapur held

on the 2nd April 1914

Official Members

Present

The Vice President

The Sub Registrar

The Sub Asst Surgeon

The D P W officer

Non-official Members

Present

Mr. D Kongadiappa

Mr. H. Guruvaniburlingappa

Mr. Sheik Hanumantsah

Mr. Danaoetti.

Mr. H Sukantsah

Mr. Chandrasekharaya

Mr. Venkatanarasaiah

Absent

Mr. S Rajagopalaiyar

Mr. Puttanna

Mr. R Rudrappa

I Read Proceedings of special Meeting of the Municipal Council dated 23rd March 1914 Re- the consideration of the Water Supply question to the town

The Sub-committee to consider the Water Supply question consisted of 9 non-official members and 7 out of the 9 who were present today - reported on the question referred to them as follows

That the cost of the Water Supply project as per estimate is Rs 65,000. Without a filter and as a filter is absolutely necessary, the whole estimate would come at least to Rs 70,000 including Rs 5000 for filter

The people of the town have already come forward with Rs 1800 towards the contribution for the project. And the Sub-committee's expectations to supplement the contribution further from the

the town people did not meet with success

Considering the generous — contribution offered by the people, the Municipal Council as a body approached the Government to come to their rescue

At the end of June 1913 the — balance at the credit of the Municipality was only Rs 2316 in Council members

The Sub Committee is of opinion that Rs 2000. out of this balance may be contributed towards the project and the Government may be approached to contribute the balance that is Rs 5000

That the income of the Municipality is as follows

House tax	Rs 1400
Shop tax	Rs 870
Mill "	Rs 150
Cart "	Rs 90
	Rs 2510
Octroi	Rs 960
Miscellaneous	Rs 225
	Rs 3695

The expenditure as follows:—

Conservancy	Rs 1956
Lighting	Rs 346
Medical	Rs. 299
School	Rs 460
General Administration	Rs 178
Communication & contingencies	Rs 183
Works	Rs 290
Miscellaneous	Rs 162
	Rs 3874

The above figures are for 1913–14 and the expenditure is being more than the income, the balance has to be reduced

The next question is about the maintenance charges of the Waterworks which comes to Rs 1000 as per estimate

To meet the above charges taxation may be levied on house tax at 75 percent

Owing to the small income from the municipality the amount spent for works in the municipality is so proportionately small and as such the condition of Road etc in

the Municipality is anything but satisfactory

Taking into consideration the above matters, it is necessary that the Government should be approached to graciously contribute Rs 50,000 for the project

Considering the above report of the Sub-Committee the Council unanimously resolved

I that Rs 2000 out of the balance at the credit of the Municipality be contributed for the Water Supply

II that the Government be approached to graciously assist the Municipality by a free contribution of Rs 50,000.

III that the maintenance charges be met by levying Water cess on the house tax at 75 p c or more, if necessary.

Sir,

With reference to your letter No 10200/M1 dated the 14th April 1914 regarding the water supply of Dodballapur Town, I have the honour to forward herewith copies of the marginally noted - - papers which furnish the rough estimates required by Government

Letter No 2410 dated the 7th April 1914 from the Superintending Engineer, Southern Circle, and enclosures

2 As regards the ways and means for meeting the cost and rates for working the system the Deputy Commissioner, Bangalore District, may be asked to expedite the particulars called for from him, direct by your office. The cost has run up owing to the provision ~~of a~~ of a masonry conduit in place of an open cart[illegible]n - - channel originally contemplated

I have the honour to [illegible]

Sir,

Your most obedient servant

K Krishnaiengar

Offg Chief Engineer

C.H.T

Re Bad 275-12/Adl-43

Letter No.2410 dated the 7th April 1914 from the Superintending Engineer, Southern Circle, to the Chief Engineer of Mysore, Bangalore.

With reference to correspondence ending with your No.2039 dated the 2nd March 1914, I have the honour to submit herewith, for information, copy of No.344 dated the 10th March 1914 addressed to the Deputy Commissioner, Bangalore District, by the Executive Engineer, Water Supply & Stores Division, and to state that further reference will be made on receipt of necessary information from the Deputy Commissioner.

Letter No.334 dated the 10th March 1914 from the Executive Engineer Water Supply & Stores Division, to the Deputy Commissioner, Bangalore District, Bangalore.

With reference to General Secretary's No.7310/M 1.275-12-9 dated the 27th January 1914, I have the honour to forward herewith my report on the water supply of Dodballapur for your opinion and favour of furnishing information regarding:-

(1) The ways and means of meeting the maintenance charges and any excess over estimate.

(2) Formulation of a set of rules for working the system without any undue advantage resulting either in favour of officials or private individuals.

2. As regards the latter, all that I can suggest is to form a water committee among the members of the Dodballapur Municipality and entrust the management to them. This committee may be represented by an even number of officials and non-officials members.

Report on the preliminary estimate of probable cost of water supply to Nodhallapur

---

Preliminary

Dodballapur is an important Taluk in Bangalore District situated 25 miles away from Bangalore on the Bangalore Hindupur Railway Line The population of the town as per census of 1911 is 7272 souls It is a growing place, a good number of inhabitants are weavers, cloth making and gunny bag making are the chief industries of the place The difficulty experienced by the townspeople for water supply is intense except during the summer months The present sources of supply are a number of wells scattered all round the town, most of the wells yielding brackish water not fit for potable purposes Several tanks are sources of supply were thought of on several occasions but all of them have fallen through for one reason or the other

Source of supply

The tanks which are worth considering as sources of supply are -

	Weir level
(1) Nagarkere	100 00
(2) Shivapur	130 00
(3) Rajaghatta	154 00
(4) Konneghatta	162 00
(5) Highest point of the town	147 6

Of these, Nagarkere was once thought of as most suitable and as the tank is below town level, a pumping project to pump water from this tank to the town was prepared and submitted but it fell through as the Municipality could not find means of maintaining the system Shivapur also is below town and hence the supply from that must be by means of pumping and so, is not a desirable source

45

Rajaphatta tank no doubt is higher than the highest point of the town (147 60) but as it is 4 miles from town, it has not not sufficient head for a gravity system

Lastly, Vonechatta tank which is situated about 4½ miles from town commands the town very well This tank is the 6th of a series of tanks of the Arkavati River, and is supposed to have a fairly good number of " Thalsburgies " in its catchment The catchment area of the tank is 10 64 its own independent being 1 3 sq miles It holds at its present weir level 136 36 units of water and irrigates about 211 acres of land The revenue to the government from this tank is about Rs 1,300/-

The present capacity of the tank is not sufficient to ensure a permanent supplyin years of bad rainfall and if this tank is selected as the source of supply, the weir may be raised to the required height to hold out for 2 years of minimum rainfall in the locality The minumum rainfall in the locality is 16" and the runoff in the catchment is assumed as 13 per cent of rainfall like that of Vessarchatta which is in the same series These figures are based on the calculations made on the rainfall and run-off of the Vessarchatta Tank which is so close to the tank in question and which moreover is the last in the same series of the Arkavati River

It will be seen from the calculating sheet enclosed that the tank is raised by 3 feet, and can supply the town with the required supply for two years of minimum rainfall and last four months of the third year i e, up to the minimum rain It is fair to assume that 2 years of bad rainfall is

always followed by a year of early rainsand hence the provision of the tank holding out to 4 months of the 3rd year seems an ample provision

Of course, the above, is based on the assumption that all the lands below the tank is thrown out of cultivation and no water allowed for them

Nature of Channel

After settling the source of supply, the next question that rises up is the nature of channel in which the water should be led by gravity to town The idea of pipe laying should be considered as impossible as the head is very little and no reasonable size of pipe can be laid with head available to discharge the required quantity of water

There are 3 other ways of leading water to the town -

(1) Open earthern channel,
(2) Open masonry duct,
(3) Covered masonry duct

Of these one was proposed to be adopted by the late Mr Venkatachar in the year 1902, when he was Executive Engineer, Bangalore Division, at a cost of Rs 6,000/- Earthern channels for water supply is not satisfactory, as the water is likely to be contaminated on its way and much of it is generally lost by evaporation and percolation Moreover, it wants constant attendance

Masonry ducts are better and consequently they can be recommended for the water supply The duct for the present water supply is designed to discharge 1-11, 10,000 gallons for 24 hours with a long slope of 1' in mile The bed of the duct at the tank bearing at 8' below tank level and at the tail end is at the highest point of the town

47

There are two sites proposed for the service reservoir, one near travellers' bungalow and the other on the ridge near Old Taluk Cutchery in town The site near Travellers' bungalow is recommended by townspeople, but I see no advantage from it On the other hand bi-rear distribution pipes have to be laid from the reservoir to the town and consequently the cost of the project will go high

As it is, the site shown in the plan, is in a commanding part of the town and has the advantage of allowing distribution pipes being laid from this place to the rest of the town As the total distance of such distribution is not much this site is recommended in preference to the one near the Travellers ' bungalow The length of the duct from the tank to the reservoir is estimated to be about 30,000 feet and cost Rs 35,000 including cost of aqueduct on its way

Nature of distribution Service

In the original proposal of water supply by Mr Venkatachar, provision was made for construction of a number of Varanjes in town But distribution of water by public fountains located at convenient localities is preferable as then, the people have greater facilities in getting good water and so there is no chance of the water being polluted by townspeople as will be case when Varanjes are introduced The levels of the town admit of pipes being laid and the proposed cost of distribution is estimated to be Rs 8000 which cannot be considered as excessive for a place like Nodhallapur

From the abstract of estimate enclosed herein it will be seen that the whole cost of the water supply without filteration system which is not feasible in this place for want of sufficient head,

amounts to Rs 65,000 This works out to Rs 6 5 per head of population and is fairly reasonable considerin other water supply like Shimoga and Harihar, where the cost comes to Rs 5 3 and Rs 3 8 respectively, even though the source of supply is quite near

Maintenance

The cost of maintaining this water supply is not much as can beseen from the enclosed estimate which amounts to Rs 1,000 per annum? The provisions made therein are necessary items and no special remark are necessary I am given to understand that the Municipality can easily meet this recurring charges without difficulty

To

D.M.Narasinga Rao, Esq., B.A., B.L.,
Offg:Secretary to the Government of H.H.
the Maharaja of Mysore, Genl. and Rev Depts.

Sir,

In continuation of this office letter No.S 853 dated the 20th April 1914, applying for a free grant of Rs.50,000/- from Government to ensure the success of the water-supply scheme for Dodballapur, I have the honor to state that the Dodballapur Municipal Council have now resolved to find half the total cost viz.Rs.35,000/-locally as noted in the margin, and to approach Government for a free grant of Rs.35,000/- instead of Rs.50,000/-.

1. Contribution by people	Rs.18,000/-
2. Contribution by Municipality ...	,, 2,000/-
3. Loan to be sanctioned by Government to the Municipality ...	,, 15,000/-
	Rs.35,000/-

2. The ways and means suggested for the discharge of the loan of Rs.15,000/- that Government might be pleased to sanction and to meet the annual maintenance charges etc. are fully set forth in the enclosed extract of the Municipal Council Resolution.

3. In Madras the rule now is invariably to give half the cost as a free grant as was stated by Sir H.A.Stuart, in the Legislative Council.

4. As this Municipality has afforded also a notable instance of public spirit and philanthropy, I request that Government might be pleased to pass early favourable orders in the matter, this will no doubt be an incentive to the other Municipalities.

I have the honor to be,
Sir,
Your most obedient servant.

K.Chandy

Deputy Commissioner,
Bangalore District.

Encl to Lr No 275-H/8/14

Extract from the Proceedings of the special Meeting of the Municipal Council held in the Taluk Office, Dodballapur on 1st August 1914.

Present:-

Mr. Mahamed Syed Sherif, Vice President,

Members -

Mr. S.Rajagopala Iyengar, Advocate,
" Lakshmikanta Iyengar, Sub Registrar,
" Kongadiappa, Head Master,
" Chicka Hanumanthiah,
" Gurusambhu Lingappa,
" Chendrasekaraya,
" H.Srikantiah
" S.Puttannaq
" R.Rudrappa,
" Venkataramana Setty,

Mr. Adinarayana Setty of the gentlemen who contributed for the water supply, besides the Municipal Members, was also present.

Read:-

1. Resolution passed regarding the water supply question in the Special meeting held on the 2nd April 1914

2. Letter No. 86 dated 17th July 1914 and No. 211 dated 30th July 1914 from the Deputy Commissioner, Bangalore District asking for definite proposals for the discharge of the loan that Government may be pleased to sanction for the success of the water supply project of the Dodballapur town.

R E S O L U T I O N .

Cost of project Rs. 70,000/-
Contribution by Government 35,000/-
Contribution by people 18,000/-
Contribution by Municipality at the credit 2,000/-
Loan to be applied 15,000/-
Total Rs. 70,000/-

The following are the average figures of the income and expenditure of the Municipality of the previous five years under the varuous heads:-

Receipts.

Octroi	Rs. 1134/-
House tax	1448/-
Shop tax	890/-
Mill tax	151/-
Cart tax	101/-
Miscellaneous	503/-
Total	4,227/-

Expenditure.

Head office	80/-
Octroi Commission and Mohatarfa	170/-
Conservancy	1675/-
Lighting	345/-
Works	161/-
Medical	299/-
Pay of Sanitary Inspector	276/-
Pay of L.F.Clerk	90/-
Schools	460/-
Miscellaneous	76/-
Total Rs.	3,632

From the above figures there will be hardly any amount left for the repayment of loan and interest, and therefore, it was resolved that the maintenance charges and the repayment of loans be met from the following sources -

1. that a water tax be levied at 75% of the house tax as already resolved and that the increased income of Rs. 1000/- be utilised to the maintenance charges of the project.

2. that a new toll-gate tax be levied and the estimated

estimated amount of income from this annually of Rs. 600/-

3. and a tax be levied on shops in the weekly market and the estimated income of Rs. 300/-

Under this head and increase, that is expected from the revision of taxes of Rs. 300/- proposed as per Bye-laws or in all Rs, 1200/- be utilised for the repayment of the loan and interest.

II It was further resolved that the Government be approached for the grant of the loan of Rs. 15,000/- to the Municipality, to be repayed in thrity years by annual instalments of Rs. 500/- for the principal and the interest that may accrue on it.
